

COUNTING ON ABACUS

FACT 1: The count on abacus is how many beads are to the right.

FACT 2: The beads to the left are in storage.

FACT 3: The count of ZERO is no bead to the right.

1. Count beads on the first wire of abacus by moving them from left to right.
2. Show the following counts on abacus.
 - (a) Seven
 - (b) four
 - (c) Nine
 - (d) Zero
3. Count the beads again. This time also tell how many beads are left in storage for each count. Do this several times until you can tell without looking the number of beads left in storage.
