

Data (1)

The head of the Galactic
Confederation (76 planets around
larger stars visible from here)
(founded 95,000,000 yrs ago, very space opera
solved overpopulation (250 billion
or so per planet - 178 billion on
average) by mass implanting.
He caused people to be brought to
Teegeetack (Earth) and put on H Bomb
on the principal volcanoes (Incident 2)
and then the Pacific area ones
were taken in boxes to Hawaii
and the Atlantic area ones to
Las Palmas and there "packaged."
His name was Xenn. He used
renegades. Various misleading
data by means of circuits etc.
was placed ^{with his crime} in the implants.
When through, Royal Officers
(to the people) captured him
after 6 years of battle
and put him in an electronic
mountain trap where he still ^(confed)
is. "They" are gone. The place
has since been a desert.

Data (Cont) - 2 -

The length and brutality of it all was such that the Confederation never recovered. The implant is calculated to kill (by pneumonia etc) anyone who attempts to remove it. This liability has been dispersed with by my tech development.

One can FREE WHEEL through the implant and die unless it is approached as precisely outlined.

The "free wheel" (auto running on and on) lasts too long drives sleep etc and may die. So be careful to do only incidents 1 & 2 as given and not play around and ~~fail to complete one Q~~ at a time. In December 67 I knew somebody had to take the plunge. I did and emerged very knocked out

but alive. Tech Data (3)
only one ever to do so in
75,000,000 years. I have
all the data now but only
that given here is needed.

One's body is a
mass of individual P's
stuck to oneself or to the
body.

One has to clean them
off by running Incident One
then Incident Two. It is
a long job, requiring care,
patience and good
auditing.

You are running beings.
They respond like any
preclear. Some large, some
small.

Thetans believed they
were me. This is the
primary error.

Good luck.

SECTION THREE 15/2/68
Additional Tech Data

There are no Body Θ 's who cannot be audited and exteriorized,

- ① There are Suppressing Body Θ 's who require Power Processes
- ② There are difficult Body Θ 's who require Θ to VI processes before they can run engrams (Inc 1 & Inc 2).

③ There are Pre Θ 's who are insufficiently trained and who cannot audit and who ARE not or overrun Body Θ 's or who cannot do Reading Level Θ -IV auditing much less Level VI auditing.

④ There are clusters of Body Θ 's who think they are one Body Θ and so can't run Inc 1 or Inc 2 as a group as they have differences.

- 2 -

① SP Body Thetaus

An SP by definition is one who is out of valence in R6. Some are just plain psychotic and SP as well. PrPr 6 handles any SP, pc or body Thetau.

This can best be done, by actual test, by the OT being an SH or AO Class VII. It can possibly be done (no test ever made) by having a Class VII audit the OT who relays the commands and answers of the body Thetau to the auditor, the OT being on a Meter; the meter will respond to the body @ if the OT is putting attention on the body @. This HAS been done with ordinary body Thetaus. It simply handles the body Thetau on a via.

When PrPr VI has been run on the body Thetau to its end phenomena, the body @ can

Then be handled as an ordinary
pc body Θ^4 as in (2) below.

2. Difficult Body Thetans

Some body Thetans are
difficult cases. They are
psychotic, or They have
fixed ideas or service faces.

To handle, one really
should be a Class ~~III~~. However,
an Θ^4 on Sect III can be
used as a relay to and from
the body Θ^4 and audited by a
Class ~~III~~. There is no substitute
for being an SHSB graduate
+ a Class ~~III~~ Intern.

Only standard Sen Tech is
used, no Tricks needed. The
auditing is fast. The needle
seldom floats on the body Θ^4
and the TA tends to start high
and come down.

When The Body Θ^4 has been
pushed up to ~~IV~~ (grade Four)
he can usually run engrams

- 4 - Sect III Add Tech Data
and can be run on their heads 1 and
2 and will blow.

The trouble with a difficult
body thetan is that he (or she)
usually has some fixed idea
which inhibits his recovery.
This responds to ordinary tech,
taking him up through the grades.

3. Insufficiently Trained OPs

Some students try to run
engrams like clearing course
materials or make other errors
because they are just not
well trained.

Such should knock off III
and do a Dianetic Course
at least or even the SHSBC.
If they still have trouble they
should return as Class VIIIs.

THE MAIN SOURCE OF FAILURE
IN SECTION THREE IS NOT
STRANGE ONs OR HIDDEN SPs
BUT STUDENTS WHO CAN'T AUDIT.

- 5 - Sect III Add Tech Data

It is easy to blame the "difficult body @'" when the truth is that one should be a better auditor.

Sect III can be left incomplete while the student is trained better - providing he does not fool about with his own ease while being trained but, now trained, recommences Section III.

One has to be able to do S&Ds on Body @'s, has to find & RC Breaks, etc, the lot where one has trouble with Sect III.

The number of body @'s a case has varies widely.

The answer with consistent trouble with III is not unusual solutions for body theans but just a better trained student. Body @'s are just @'s.

4. Clusters Of body O's.

THE ONLY KNOWN DIFFERENCE between auditing body thexans and auditing pcs (and this is not a real difference as some pcs are a total cluster) is that body thexans can come in clusters.

Then I ~~won't~~ won't run on the cluster as each individual Oⁿ in the cluster has a different view point and received me as an individual, not as a cluster.

A CLUSTER HAS A MORE RECENT MUTUAL EXPERIENCE WHICH HAPPENED TO THE WHOLE CLUSTER.

The error they make is the basic error of thexans. They think we are all ONE, whereas we are individuals.

To detect a cluster: (a) there is a force or pressure or heavy somatic in an area (b) or there is "a" @ "who can't erase Inc 1 or 2. This means there are several @'s who think they are one @,

To remedy this situation.

- (1) Date a mutual incident for the cluster to find the point they "became one". Usually one gets this easily.
- (2) locate where it occurred in terms of planet and star (or even planet, star, Town and place in the Town).
- (3) List four types of incident and find what it was (lightning, psychiatric shock etc)
- (4) Run the incident as a single engraving.
